

GODARK RFID PROTECTION MONEY BELT FAQs

How do I test the RFID functionality?

If you are looking for a very simple test, leave your tap payment card in the money belt, and tap it over a tap payment terminal, such as the ones found at any store. The signal should be blocked, and therefore your information will not transmit.

Can I wear this through airport security?

It would have to be taken off at airport security screening check point.

Will it work for my key FOB?

The RFID blocking material in Tarriss' neck wallet block the frequencies typically found in payment, identification, and transit cards (13.56 MHz and above). They will only block key FOBs if they also work on these same frequencies.

However, unlike payment and identification cards, key FOBs are much less standardised and can vary across a range of frequencies. Tarris GoDark RFID Protection Neck Wallet is generally intended for use with credit cards and passports.

Will the microphone be blocked too?

No. Sound waves are not electromagnetic. Only electromagnetic waves are blocked by Faraday bags.
